

Urban Development, population growth & Infrastructure

Monday 22 November, 5:30pm Chatswood

"I want to do things that challenge the norms in design, planning and policy and make it happen through amazing projects" S. Driscoll

One of the biggest environmental challenges we face is planning for sustainable population and urban growth.

Australia's population and our cities and towns are growing rapidly, increasing our demands on natural assets and intensifying environmental impacts.

How will future communities be developed? What are the implications for engineering and building professionals in terms of infrastructure development, water management, utility services, and managing the likely impacts of climate change? What are the controversial and changing issues?

Join us in a lively discussion as Steve Driscoll, Director Sustainability Planning & Policy, outlines Landcom's view on new developments, followed by a highly interactive Q&A session.

Steve Driscoll
Director Sustainability
and Policy

Landcom is a State-Owned Corporation of the NSW Government. Landcom plans new developments and creates residential and industrial communities on vacant land and established sites.

Steve Driscoll is a degree qualified town planner (BTP (Hons)) with 18 years experience in local and state government, primarily in strategic land use planning and policy development.
